NYDA® 50 ml

- Effective treatment for lice and eggs
- Excellent tolerability
- Contains no pesticides
- Unique mode of action prevents the development of resistance

ADVICE FOR COMBATING HEAD LICE

In addition to applying the NYDA® treatment following an infestation, these tips will help to prevent a new infestation.

- 1. Check for lice as soon as possible.** Diagnosis and prompt treatment of an infestation increases the effectiveness of prevention and control measures.
- 2. Before treatment with NYDA®, it is important to control the infestation by using a head lice comb on every member of the family (the NYDA® lice comb with a 0.2 mm gap between the teeth is recommended, and is specially designed for this purpose), and if necessary, apply the treatments on the same day.**
- 3. Get your child involved in hunting for lice in a fun way.** By doing so, the treatment will not be an unpleasant experience, and will even keep them entertained.
- 4. Live lice are difficult to locate.** Evidence of an active infestation can be determined by identifying the presence of eggs clinging to the roots of the hair. Therefore, it is also important to use a lice comb to detect the presence of lice and eggs.

EASY APPLICATION

Important: Apply NYDA® to dry hair only.

- 1. Spray NYDA® on the roots of the hair, and massage it in until the hair is completely coated.**
- 2. Allow NYDA® to work for 30 minutes.**
- 3. After 30 minutes, comb the dead lice and eggs out of the hair using the NYDA® lice comb (included in the pack).**
- 4. Allow NYDA® to work for 8 hours.**
- 5. Wash your hair using your regular shampoo.**
- 6. Repeat the treatment in 8-10 days.**
